Why Locally exists

Running a business on your own means doing two jobs. There is the work you started the business for, and there is everything around it: mail, posts, quotes, invoices, reviews, the website, the ads.

The second job rarely gets the attention it deserves, because it has to fit into evenings and weekends. Locally takes the first draft of that second job off your plate. It is a team of AI specialists that lives on your own computer. Each specialist has one job, a name and a desk in a small office you can watch at work. They prepare the work. You read it, change what you want and decide what goes out.

Why a team, and not a chatbot

A chatbot waits for you to type, forgets your business between conversations and hands you text to copy and paste. That still leaves the work with you. Locally is built the other way around: you describe the result you want once, the team splits it into tasks, and the drafts arrive where you need them, ready for your OK.

Four design choices

Everything in Locally follows from four choices. They explain how the product behaves.

Drafts only

The team prepares. Sending, publishing, paying and switching on ads always need your approval. The app enforces it.

On your computer

A desktop app for Mac and Windows. Your files, folders and keys stay on your machine.

Your own AI

The team thinks with the Claude or ChatGPT subscription you already pay for. Locally adds no AI fees.

Pay once

You buy Locally once, with 12 months of updates. There is no monthly fee to Locally.

How the team is organised

Every Locally office has the same structure: one team lead, a Basics team that every business needs, and specialists for your kind of work.

Michael, your team lead

Michael is the one you talk to. You give him a brief in plain words in his panel ("Ask Michael to plan, dispatch or check on anyone"). He turns it into tasks, decides which specialist does what and in which order, and shows the plan as a **Plan · N tasks** card with a link to the Board. When something is unclear, he asks you before anyone guesses.

The Basics team

Nine specialists work for Michael in every kit: Vera (strategy), Mia (marketing), Leo (website), Max (ads), Ava (sales and reviews), Finn (admin), Lina (SEO), Nina (customer care) and Otto (tech help). Together they cover the work almost every small business has. Chapter 03 lists their tasks.

Kit specialists

Each kit adds a ready-made team for your kind of business: three specialists in most kits, six in E-commerce, and four teams of three in Local Businesses. In total a kit gives you 12 to 21 trained specialists. Chapter 04 describes every one of them.

One shared memory

The whole team shares one team folder (**Documents** → **Locally**). Vera writes your business profile there: what you sell, where, your prices, your tone and your rules. Every specialist reads it before starting a task. You never explain your business twice, and the drafts get closer to what you want over time.

How you add them

In **Settings** → **General** you find the **Ready-made team** cards. Untick anyone you do not need, click **Add 9 team members** (Basics) or **Add 3 team members** (a kit team), and click **Spawn** for each person. Kit cards unlock when your licence is active.

The Basics team

In every kit. Each specialist has one job and a written playbook. Every task below ends as a draft for you.

Michael TEAM LEAD

The one you talk to. He splits your request into tasks, hands them to the right specialist, shows the plan on the Board and asks you when something is unclear.

Vera STRATEGY

Keeps your business plan with the quarterly goal and this week's top 3, each with an owner. Writes your positioning and ideal customer, gives pricing options with pros and cons, and reviews once a month what worked.

Mia MARKETING

Every Monday a content plan: three posts with ready-to-paste captions, hashtags and a photo idea, tied to your priorities. Writes your newsletter as a draft in MailerLite, Brevo, Klaviyo or Kit.

Leo WEBSITE

Builds a simple, fast, mobile-friendly site you preview on your own computer. Only after your yes he puts it on Netlify as a draft, and you press Publish. On WordPress he writes pages and posts as drafts.

Max ADS

Writes ad proposals with goal, audience, budget and two or three ad texts. After your yes he prepares the Facebook and Instagram campaign switched off; you switch it on. Every Monday a plain results summary with one piece of advice.

Ava SALES & REVIEWS

Finds good-fit prospects and keeps a lead list. Prepares at most 20 personal first messages a day, only through channels the law allows. Drafts replies to new reviews and helps you ask happy customers for one.

Finn ADMIN

Makes quotes and invoices as drafts in Moneybird or Stripe. Every Friday he checks open and late invoices and prepares friendly reminders. On the first Monday of the month: last month's money overview, including Stripe and Whop.

Lina SEO

Researches local and niche keywords, gives you a Google Business Profile checklist, writes on-page fixes and article drafts, and checks each month how search is going with the numbers you share.

Nina CUSTOMER CARE

On every inbox round she leaves a reply draft for each new customer mail. She drafts answers to Whop and Discord questions, keeps your FAQ up to date and puts urgent, angry or legal mail at the top of her report.

Otto TECH HELP

Helps you choose and set up tools, explains connections and email settings (SPF, DKIM, DMARC), runs a weekly read-only health check of your website and drafts privacy basics such as a privacy notice.

04

The kits and their specialists

Every kit is the same app with a team trained for one kind of business. The Local Businesses kit includes four teams; you add the ones that fit.

Trades LOCAL BUSINESSES KIT

You do the job, your team does the paperwork.

Bram JOB INTAKE

Reads new job requests, asks the customer only for what is missing (photos, address, m², build year), keeps your agenda and drafts confirmations and day-before reminders.

Joost QUOTES & WORK ORDERS

Calculates quotes with the right VAT split (9% or 21%), turns your job notes into work orders and draft invoices, and follows up quotes that got no reply.

Lotte LOCAL MARKETING

Turns finished jobs into review requests and before/after posts (with the customer's permission), and keeps a seasonal campaign calendar.

Salons LOCAL BUSINESSES KIT

You look after clients, your team looks after the inbox.

Sophie BOOKING DESK

Drafts replies to appointment requests, reschedules and cancellations, keeps your agenda file and writes your no-show and cancellation policy.

Yara SALON CONTENT

About three posts and two Story ideas a week, a clear price list and seasonal promos. Before/after photos only with the client's consent.

Iris CLIENT CARE

Drafts "we miss you", birthday and loyalty mails and review requests from the client list you export, with an opt-out line in every mail.

Horeca LOCAL BUSINESSES KIT

You run the kitchen, your team runs the admin.

**Fleur** HOST

Drafts replies to booking, group and event mails, writes group-menu and event offers, and drafts replies to the reviews you paste in.

**Mats** KITCHEN & MENU

Writes menu texts, builds the allergen overview from your own menu (unknown stays unknown), drafts specials posts and supplier order lists.

**Daan** FLOOR MANAGER

Makes the weekly plan with holidays and season moments, drafts the staff schedule and prepares catering offers to local businesses.

Freelancers & consultants LOCAL BUSINESSES KIT

You do the work, your team does the admin.

**Noor** CLIENT DESK

Turns inquiries into tailored proposal drafts, follows up, runs each engagement from yes to closing and writes session recaps.

**Tess** HOURS & BILLING

Keeps your hour log, checks it every Friday, counts the Dutch urencriterium and prepares monthly invoice drafts per client.

**Ruben** THOUGHT LEADERSHIP

Two LinkedIn posts a week in your own voice, case studies and testimonial requests, with your client's permission. You post them.

TIP

Dutch rules are built in where they matter: the 9% and 21% VAT split for trades, the urencriterium for freelancers, allergen rules (EU 1169/2011) for horeca. Outside the Netherlands the team asks which rules apply.

E-commerce: Webshop team E-COMMERCE KIT

For the shop you run today.

**Sam** ORDER CARE

Drafts replies to order and shipping mail with the order details and tracking looked up in Shopify. Other mail stays with Nina.

**Wren** PRODUCT WRITER

Finds products with thin descriptions or SEO texts and proposes better ones. Publishes a text only after your yes for that product.

**Dana** DAILY BRIEFING

Yesterday's orders, revenue, refunds, open orders and waiting mail in five lines, compared with the same weekday last week.

E-commerce: Growth team E-COMMERCE KIT

For growing it.

**Aria** PRODUCT SCOUT

Scores product ideas from public data, compares suppliers and landed costs, and drafts the request-for-quote messages you send.

**Milo** GROWTH WRITER

Amazon and TikTok Shop listings, ad hooks and creator briefs, and Klaviyo email flows, all as drafts. You paste listings in yourself.

**Nora** PROFIT & STOCK

Margins and break-even ROAS per product, a weekly profit check, reorder alerts, and a look at returns and chargebacks.

The E-commerce kit has two cards in Settings → General: the Webshop team and the E-commerce growth team. Add both and all six join Michael and the Basics team.

Agencies AGENCIES KIT

Take on more clients, not more payroll.

**Ezra** GROWTH LEAD

Sharpens your niche and offer, researches leads from public sources and hands them to Ava, preps your discovery calls and writes proposals.

**Maya** CLIENT SUCCESS

Onboards won clients, keeps the delivery tracker, drafts client mail and Monday client updates, and checks deadlines on Wednesday.

**Jonas** CLIENT RESULTS

Writes the monthly report per client, case studies only with written permission, and a weekly renewal, risk and upsell check.

Coaches & Course Creators COACHES & COURSE CREATORS KIT

Coach more, let your team build the course.

Elena PROGRAM DESIGNER

Shapes your offer and tiers, then builds your course: modules, lesson scripts, worksheets and quizzes. No made-up results.

Theo SALES

Writes your Whop sales page, webinar or VSL script and launch emails as drafts, plus a prep brief for every booked sales call.

Ivy CLIENT SUCCESS

Tracks clients, drafts weekly check-ins and renewal reminders, flags clients who go quiet and collects testimonials with permission.

Creators & Clippers CREATORS & CLIPPERS KIT

Post every day without editing every night.

Zoe CONTENT PLANNER

Keeps your idea bank and writes hooks, scripts, captions and a weekly posting calendar per platform, plus what worked from the stats you paste.

Nico CLIPPER

Finds the best 30 to 60 second moments in your long videos and cuts vertical clips with captions. Only clips you have the rights to.

Luca BRAND DEALS

Builds your brand list, drafts personal pitches, UGC scripts and your rate card, and tracks deals with the right #ad disclosure.

Whop Communities WHOP COMMUNITIES KIT

Grow the community, your team handles the rest.

Kai MEMBER PULSE

Reads your members, cancellations and failed payments (read-only), writes the Monday churn report and drafts save and win-back messages.

Jade MEMBER EXPERIENCE

Writes welcome DMs, the first-week path, the weekly engagement calendar and reply drafts for member questions.

Rio GROWTH

Prepares your affiliate program, honest launches and promos, and Whop Content Rewards clipping briefs.

Trading & Picks Communities TRADING & PICKS COMMUNITIES KIT

Education and member admin. Never picks, never signals, never advice.

Owen COMPLIANCE

Checks posts, sales pages and ads for risky claims, and turns your own trade or pick log into honest stats with every loss and fee included.

Clara EDUCATION WRITER

Writes the weekday pre-market brief or slate overview, the Sunday recap and your lesson library, as education from public sources.

Felix COMMUNITY MANAGER

Welcomes new members, drafts answers to member questions, keeps the FAQ, plans AMAs and reports every Monday who left and why.

IMPORTANT

The Trading & Picks Communities kit is for education and member admin only. It never gives signals, picks or financial advice, and its stats always include losses and fees.

Honest by design

Several kits carry their own guardrails, written into each specialist's playbook:

- ✓ Coaches: sales pages and course material without made-up results. Testimonials only with written permission.
- ✓ Creators: brand work gets the right #ad disclosure. Clips only from videos you have the rights to.
- ✓ Agencies: case studies only with the client's written permission and verified numbers.
- ✓ Salons and trades: before/after photos only with the customer's consent, nothing identifying.
- ✓ Horeca: allergens only from your own menu. Unknown stays unknown.
- ✓ Sales outreach: only through channels the law of your country allows, at most 20 a day.

05

A working day and week

Locally works in rounds. Some work starts because you ask for it; routine work starts on its own schedule.

Evening: the brief

Before you stop, give Michael what you need for tomorrow: "Draft replies to today's mail, make the quote for the bathroom job in Goes, plan next week's posts around the open day." He splits it into tasks overnight. For that, your computer stays on with Locally open and **Keep working while away** switched on.

Morning: approve

With your first coffee you open the office and see what happened. Some drafts wait for you, routine rounds are ready, and Michael may be planning the next job.

TIME	WHAT HAPPENED
08:02	Nina drafted 9 replies to new reviews. You approved them.
08:31	Finn drafted 2 invoices. They wait for your OK.
08:47	Lina rewrote 4 page titles for search. They wait for your OK.
09:05	Michael is splitting your spring launch into 6 tasks.

An illustration of a typical morning, not data from a real customer.

During the day

You give a brief whenever something comes up. You do not have to watch the team work. When a draft is ready, or when someone needs an answer, the office shows it: green means working, orange means somebody needs you.

The office view

Three views: the **Floor** with every room live (Planning & web, Research & SEO, Admin & support, Marketing, Lounge), the **Board** with columns Lead, Working, Needs you and Done, and the **Graph** of who hands work to whom.

06

Briefs and approvals

The two moments that matter are the brief, where you say what you want, and the approval, where you decide what goes out.

1

Say what, for whom and when

A good brief names the result, the audience and the deadline. "Write a welcome email for new members, friendly, no more than 120 words." Add tone, length or an example if you have one.

2

Let Michael split it up

Michael picks the specialists and sets the order. A launch might become six tasks across strategy, social, website and ads. You can also message any specialist directly.

3

Answer questions

If something is unclear, a specialist asks you in

Ask me

instead of guessing. A short answer is enough.

4

Approve, edit or send back

Every draft waits for your decision.

YOUR
CHOICE

WHAT HAPPENS

Approve

The draft goes ahead exactly as you approved it. You send or publish it, or say yes and the specialist puts it in place as a draft or paused item.

Edit

You change the text yourself, then approve.

Send back

The specialist rewrites it with your comment.

IMPORTANT

Always your call. Locally never sends, posts, pays or launches on its own.

Briefs that work well

- "Nina, check my inbox and draft replies."
- "Mia, write three Instagram posts for this week in my tone."
- "Finn, prepare last month's invoices as drafts."
- "Vera, what should my top 3 be this week?"

Connecting your apps

Optional. Your team works without connections, but with them it can look things up itself and put drafts straight where you need them. All in Settings → Connections.

APP	WHAT YOUR TEAM DOES WITH IT
Support mailbox	Reads new mail, leaves replies as drafts in your own mailbox. Gmail, Google Workspace, iCloud, Yahoo, Fastmail or your web host, with an app password.
Shopify store	Looks up orders and tracking, proposes product texts, daily sales summary
Whop	Members, cancellations, payments and reviews. Read-only.
Stripe	Finn reads revenue and makes invoices as drafts. Charging and refunds stay with you.
Moneybird	Quotes and invoices as drafts, watches unpaid invoices
Discord server	Spots unanswered questions. Read-only.
MailerLite, Brevo, Klaviyo, Kit	Newsletters and campaigns as drafts
WordPress site	Pages and posts as drafts; you publish
Netlify	Leo's website as a preview; you publish
Facebook & Instagram ads	Max reads results and prepares campaigns switched off
Calendly	Sees booked calls to prepare you. Read-only.
Notion	Plans and client pages in the pages you share

How connecting works

Each card has numbered steps: where to click in the other app, which permissions to give and which key to copy. Paste it and click **Connect**. The key is "stored encrypted on this computer only. Your agents never see it." Disconnect from the same card at any time; drafts already made stay, nothing is deleted on the other side.

NOTE

Outlook.com and Microsoft 365 mailboxes are not supported yet. Forward your support mail to a Gmail address and connect that one. Setup guide 03 walks through every card.

Schedules and memory

Two things make Locally feel like a team instead of a tool: work that starts by itself, and a team that remembers.

Schedules

When you add a team, its weekly rounds switch on under **Triggers** → **Schedules**, each with an on/off switch. Michael forwards each round to the right person. The result is still a draft.

ROUND	WHO	WHAT YOU GET
Morning mail round	Nina (and your kit's care person)	A reply draft for every new customer mail
Monday plan	Vera, Mia, Max	Top 3 priorities, content plan, last week's ad results
Friday check	Finn, Tess	Unpaid invoices and reminders, the week's hours
Monthly	Finn, Lina, Vera	Money overview, search check, what worked
Kit rounds	For example Dana, Kai	Daily sales briefing, daily member pulse and Monday churn report

NOTE

Schedules run only while Locally is open and your computer is awake. Turn on **Open at login** and **Keep working while away**. Missed rounds run when the computer wakes. To stop one, switch it off or tell Michael: "Pause Nina's afternoon round."

Memory

- ✓ **Business profile:** `business/profile.md` holds what you sell, your prices, your tone and your rules. Unknowns are left as "?" for you to fill. Ask Michael or Vera to change it.
- ✓ **Business plan:** `business/plan.md` holds the quarterly goal and this week's top 3. Everyone reads it first.
- ✓ **Personal notes:** each specialist keeps their own memory, so you do not repeat yourself.
- ✓ **Activity:** a readable diary of who started, finished and handed what to whom.

09

Privacy: your data stays on your computer

Locally runs on your computer. Your business data, AI conversations and app keys stay there. We only receive what we need to sell you Locally and check your licence.

What we never receive

- ✓ Your business data, files, customers, orders or emails
- ✓ Your prompts, agent drafts or AI conversations
- ✓ Your Claude, ChatGPT or business-app passwords and keys, which are stored encrypted on your computer
- ✓ Your payment card details; Whop handles payments

Where your data does go

DATA	GOES TO
Task text the team thinks about	Your own AI provider (Anthropic or OpenAI), under your own account and their terms
Data for connected apps	Directly from your computer to that app (Shopify, your mailbox, Whop ...)
Licence check	Our licence server: your key and a hashed machine ID, not your device name or files
Update check	The update server, to see if a new version exists
Anonymous usage stats	Only if enabled, no names or message text. Switch off in Settings → General.

You are in control

When you use Locally with your customers' personal data, you are the controller of that data under the GDPR. During a setup call or Done-for-you session we only look at what is needed and treat everything as confidential. Full details in our privacy policy: locallyai.whop.site/legal/privacy/.

The approval and safety model

The rule is simple: the team prepares, you decide. Here is what that means in practice.

ACTION	THE TEAM DOES	YOU DO
Customer mail	Writes the reply as a draft in your mailbox	Read and press send
Social posts	Writes captions, hashtags and photo ideas	Post them yourself
Newsletters	Saves a draft in MailerLite, Brevo, Klaviyo or Kit	Send it
Invoices	Makes drafts in Moneybird or Stripe	Finalise and send, charge or refund
Website	Builds a preview or WordPress drafts	Press Publish
Ads	Prepares the campaign paused, with your budget	Switch it on in Ads Manager
Product texts	Proposes new texts, keeps the old ones	Say yes per product
Whop, Discord, Calendly	Reads only	Everything else

How it is enforced

- ✓ **Let your team work on its own** lets the team plan and draft without asking each step. Sending, publishing and payments still wait for you.
- ✓ **Autonomy & Budgets** in Settings sets how much the team may do alone, and spending limits.
- ✓ Keys are stored encrypted on your computer. Agents use them through the app, never see them.
- ✓ Every specialist's playbook repeats the rule: nothing goes out without the owner.

IMPORTANT

AI can make mistakes. That is exactly why everything is a draft. Read before you send.

Locally compared

Locally sits between doing everything yourself and hiring help. It helps to compare it with the options owners usually weigh.

	A CHAT WINDOW	HIRED HELP	LOCALLY
Knows your business	No, you explain it every time	Yes, after onboarding	Yes, in one shared profile
Does the work in your apps	No, you copy and paste	Yes	Yes, as drafts
Works without you asking	No	Yes	Yes, in daily and weekly rounds
Cost model	Monthly subscription	Hourly or monthly	Once, plus your own AI
Where it runs	In the cloud	At their place	On your own computer
Who decides what goes out	You	Agreed together	Always you

What Locally does not do

Locally does not replace your judgement, your accountant or your lawyer. It drafts; you check. Contract checks and privacy texts are a starting point, not legal advice. Results depend on your business, your input and your AI subscription. Any time or money you save is your own estimate, not a promise.

System requirements and installation

A computer you use every day, an AI subscription and about 15 minutes.

YOU NEED	DETAILS
Mac	macOS 11 or newer, Intel or Apple silicon (one universal download)
Windows	Windows 10 or 11 (64-bit)
AI subscription	Claude Pro or Max (recommended), or ChatGPT Plus or Pro
Internet	For your AI, your connected apps, the licence check and updates
Licence key	On your Whop order page and in the purchase email. Not needed for Locally Free.

Installation

1 Download

Mac: locallyai.whop.site/download/mac. Windows: locallyai.whop.site/download/windows. Also under Download & license key in your Whop order.

2 Install

Mac: drag Locally onto Applications and open it from there. Windows: run the installer.

3 Welcome steps

Choose I'm non-technical, pick Claude or ChatGPT, paste your key and click Activate, then Finish.

4 Sign in to your AI and add your team

Sign in once in Michael's panel, check Settings → Prerequisites says Ready, add your teams and click Spawn.

ONE-TIME WARNING

Mac: until Apple registration is complete, macOS shows a one-time warning. Click Done, open System Settings → Privacy & Security and click **Open Anyway**. **Windows:** "Windows protected your PC": click **More info** → **Run anyway**. You do this only once.

Licence and updates

You buy Locally once. Your licence and updates work like this.

Your licence

- ✓ One licence works on one computer at a time. The key looks like L-XXXXXX-XXXXXXXX-XXXXXXX.
- ✓ Paste it in the welcome steps or under **Settings** → **General** (Your plan card) and click **Activate**.
- ✓ New computer? On the old one: **Settings** → **General** → **Move to another computer** → **Deactivate here**. Then activate on the new one. Old computer gone? Message us on Whop.
- ✓ Locally checks your licence about once a week, using your key and a hashed machine ID.

Updates

- ✓ Every kit includes 12 months of updates from the day you buy: new teams and specialists, new connections, bug and security fixes.
- ✓ The built-in updater checks every six hours and installs new versions, with a plain-words changelog. **Check for updates** in Settings → General checks now.
- ✓ Your teams, files and settings stay as they are.
- ✓ After the 12 months, the version you have keeps working. You keep every update you received.
- ✓ Want newer versions after that? The optional Update Plan adds 12 more months for €79. Paste its key under **Settings** → **General** → **Extend updates**.

Full terms: locallyai.whop.site/legal/terms/. The English text is binding.

The three plans, and the free version

You pay once. Pick how much help you want with the setup. Prices include VAT.

PLAN	PRICE	WHAT IS INCLUDED
Self-install	€297, once Launch price €197 for the first 100 buyers, code LAUNCH	The app, your kit and the Basics team. A licence key for one computer. 12 months of updates. 14-day "works on your computer" guarantee. All setup guides.
With setup call	€697, once	Everything in Self-install, plus one live setup call of up to 60 minutes with us (worth €400) and 30 days of support via Whop chat.
Done-for-you	€1,997, once	Everything in Self-install. We install and configure Locally with you in one live session of up to 3 hours (worth €1,700), plus 60 days of support via Whop chat.
Update Plan	€79, optional	12 more months of updates for a kit you already own.

Running costs

COST	AMOUNT
Locally, after you buy	Nothing per month
Your own AI	About €20 to €23 a month for Claude Pro or ChatGPT Plus, paid to Anthropic or OpenAI
Rented computer (optional)	About €10 a month to the provider, only if you want that

Locally Free

Try the app before you buy: the app for Mac or Windows, Michael as your team lead, two specialists you set up yourself, the office view and all guides. No schedules and no connections. No licence key needed. Start at locallyai.whop.site/free/.

Refunds: Self-install and With setup call have the 14-day guarantee. Done-for-you: full refund if you cancel before the session. EU consumer rights apply as described at locallyai.whop.site/legal/refund/.

Your first week

From order to first draft takes about 15 minutes. Use the first week to teach the team your business.

DAY	WHAT TO DO
Day 1	Install, activate, add your teams. Click Get to know my business and fill in the profile and answer Michael's questions in one go.
Day 2	Connect your mailbox (Settings → Connections) and let Nina do her first inbox round.
Day 3	Connect the one app your money runs through: Moneybird, Stripe, Shopify or Whop.
Day 4	Ask Vera for this week's top 3 and Mia for three posts. Send back what is not right, with one line why.
Day 5	Check Triggers → Schedules . Keep the rounds you want, switch off the rest.
End of week	Give your first evening brief. Approve in the morning.

TIP

Approve what is good, send back what is not with a short comment. The team reads your feedback and its notes, so the drafts need fewer changes over time.

The setup guides

Step-by-step guides with screenshots are at locallyai.whop.site/guides/: 01 Getting started with Locally.ai, 02 How Locally.ai works, 03 Connect your apps, 05 Help and troubleshooting, 06 Run Locally.ai on a rented computer, and a guide for every kit.

Support and questions

Support runs through Whop chat at whop.com/locallyai. It is the fastest way, and a real person answers. You can also email info@locallyai.nl.

Do I need to code?

No. You install an app and give the team goals in plain language. Connecting apps is optional.

Does the team work when my computer is off?

No. It works while the app runs. To keep it working while your laptop is closed, run Locally on a rented computer (guide 06).

Which AI do I need?

Claude Pro or Max, or ChatGPT Plus or Pro. About €20 to €23 a month for Pro or Plus, paid to Anthropic or OpenAI.

"You've hit your usage limit"?

Your AI subscription has a cap per few hours. Wait for the reset, use fewer team members at once, or upgrade.

Can Locally send things on its own?

No. Sending, publishing, payments and ads always need your approval.

What happens after the first year?

Your version keeps working. Newer versions come with the optional Update Plan, €79 for 12 more months.

Something does not work?

Ask Otto first: "Otto, why isn't my mailbox connecting?" Still stuck? Message us on Whop with a screenshot, your Mac or Windows version and what you clicked. Never send your licence key or passwords.

About Locally.ai

Locally is made in Zierikzee, the Netherlands, by Aion B.V. Founder: Thomas Visser.

DETAIL
